Competent authority	Financial Supervisory Authority, Finansinspektionen (FI), Sweden
KID production date	20 October 2019, 19:00 (local time Stockholm)

What is this product?

Type

The product is a structured investment in the form of a tracker certificate under Swedish law and traded on the Nasdaq First North NDXS (MTF) as the primary market place.

Objectives

The investment product is a special certificate, an exchange traded product, which is different from most investment products. The product's objective is to provide a daily return approximately equal to the performance of (the Digital Asset) Ether (ETH) price across the 5 most liquid digital exchanges available to our methodology, before management fees and costs. This means that when the price of Ether rises by 1% on the 5 most liquid digital exchanges, the product should rise by approximately the same percentage. The methodology is created by XBT Provider.

To hedge its exposure under the certificates, XBT Provider (the Issuer) enters into an intra-group collateral management arrangement with an affiliate (GABI Trading Limited), whereby the Issuer provides cash raised from the issuance of the Certificate to the GABI Trading Limited in exchange for a contractual promise to pay the settlement amount of the note (the original purchase price plus or minus any price movements in the underlying crypto currency less the relevant fee). To hedge its exposure under that contract, GABI Trading Limited purchases the relevant crypto currency on a 1:1 basis, in both physical form and using derivative contracts. The product does not distribute dividends. Investors can purchase and sell certificates on the stock market (the so called secondary market) during normal exchange traded hours set and operated by the exchanges.

The product does not have a fixed maturity. The Issuer has the right to terminate the product at any time in accordance with (and subject to) the terms of the Prospectus. After termination, you will receive a cash amount equal to the Settlement Amount (the original purchase price plus or minus any price movements in the underlying crypto currency less the relevant fee)

Product

Product Currency	SEK	Maturity Date (Maturity)	No maturity date
Initial Fixing Date	09 October 2017		
Issue Date	09 October 2017		

Underlying

Ether (USD per ETH)			
Type	Virtual Currency	Initial Reference Price	
Currency	USD	Divisor	0.01
Primary Eligible Market Places	Poloniex, Kraken, Bitfinex, GDAX and Gemini	Management Fee	2.50% p.a.
Reference Price	Determined by XBT Provider AB (Publ)		

In exceptional circumstances, and at the discretion of the Issuer, an investor may be allowed to create and redeem units directly from the management company on the primary market. The payment obligations of the Issuer are guaranteed by CoinShares (Jersey) Limited a company regulated by the Jersey Financial Services Commission.

Intended Retail Investor

The product is intended for investors who intend to form and / or optimize assets in general and have a short-term investment horizon. The product is designed for investors with informed knowledge and / or experience with financial products. The investors are able to bear a total loss of their investment and do not attach any importance to capital protection.

What are the risks and what could I get in return?

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for the recommend holding period. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back.

We have classified this product as 7 out of 7, representing the highest risk class. This classification rates the potential losses from market movements during the term of the product as very high. Poor market conditions are very likely to impact the capacity of the Issuer to pay you. You will receive payments in the product's currency, which may be different from your domestic currency. In this case, be aware of currency risk. The final return you will get depends on the exchange rate between the two currencies. This product does not include any protection from future market performance so you could lose some or the entire amount you have already paid in. If the Issuer and the Guarantor are not able to pay you what is owed, you could lose the amount you have already paid in.

The product invests in the Digital Asset, Ether (as defined in the prospectus) which is traded on various digital exchanges and is generally characterized as presenting high risk, but which also allows for the opportunity of high returns. Given the fact that the product invests in one volatile Digital Asset, the product has a higher risk than other products using the diversification method of investing in a basket of Digital Assets.

The indicator mainly reflects the up and downturns in the value of the product. The product can be expected to have large fluctuations due to the nature of the underlying asset class.

Credit Risk

Investors are exposed to the credit risk in relation to the Issuer. The Issuer's financial position is affected by a number of factors; an investor's ability to obtain payment in accordance with the terms and conditions is therefore depending on the Issuer's ability to meet its payment obligations. Poor market conditions are likely to impact the capacity of the Issuer to pay you. This risk is not considered in the indicator shown above.

Counterparty Risk

The retail investor may face losing all his investment due to the unlikely event of the Issuer defaulting. However, the product is backed by the guarantee issued by the guarantor, if the Issuer and the Guarantor are not able to pay you what is owed, you could lose the amount you have already paid in.

The actual risk may be significant if you redeem at an early stage and you may receive less. The product is considered to have currency risk attached to it. Further information about risk can be found in the base prospectus.

Other key risks of the product are:

- The Relevant Underlying asset (defined as: Ether (ETH), priced in USD terms) may not perform well, or may not perform as well as you anticipated. Past performance is not a guide to future performance.
- You may not be able to sell the product when you wish to or, if you are able to sell it, at a favourable price.

Performance scenarios

The table shows the money you could get back as a percentage over one year assuming that you invest SEK 10,000. The scenarios shown illustrate how your investment could perform. The average returns shown in the table are not annualised, which means that they must be comparable to the average returns shown in other key information documents. The scenarios presented are an estimate of future performance based on evidence from past on how the value of this investment varies and are not an exact indicator. What you will get will vary depending on how the market performs and how long you keep the investment. The stress scenario shows what you can get back under extreme market conditions and not taking into account a situation where we can not pay you.

The displayed figures include all costs for the product itself but may not include all the costs that you have to pay to your adviser or distributor. The figures do not take into account your personal tax situation, which can also affect how much you get back

Based on SEK 10,000 Principle		1 Year SEK
Stress Scenario	Average Returns	-100.00%
	What you might get back after costs	0.35
Unfavourable Scenario	Average Returns	-72.04%
	What you might get back after costs	2,796.90
Moderate Scenario	Average Returns	-13.28%
	What you might get back after costs	8,671.59
Favourable Scenario	Average Returns	172.48%
	What you might get back after costs	27,247.47

What happens if the product manufacturer is unable to pay out?

The product is not covered by an investor protection or guarantee scheme. The payment obligations of the Issuer are guaranteed by the Guarantor. This means that if the Issuer becomes insolvent and the Guarantor also becomes insolvent or otherwise fails to make full payment under the guarantee, you may suffer a total loss of your investment.

What are the costs?

Costs over time

The Reduction in Yield (RIY) shows how the total costs you pay affect the return you might get from the investment. Total costs include non-recurring costs, current costs and overheads. The amounts shown here are the cumulative costs for the product itself for the recommended holding period. These include potential penalty charges in the early term. The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time. The figures are based on the assumption that you invest SEK 10,000. The figures are estimates and may change in the future.

Investment €10 000	If you cash in after recommended holding period (1 year):
Total costs	SEK 250
Impact on the return (RIY) per year	2.5%

Composition of costs

The table below shows:

- Impact each year for the different types of costs on the return you might receive from the investment at the end of the recommended holding period;
- What the different cost categories mean.

This table shows the impact on return per year			
One-off costs	Entry cost	0%	The impact of the costs that you pay when entering your investment
	Exit cost	0%	The impact of the costs of exiting your investment when it matures
Ongoing costs	Portfolio transaction costs	0%	The impact of the costs of us buying and selling the underlying investment for the product
	Other ongoing costs	2.5%	The impact of the cost that we take each year for managing your investment
Incidental costs	Performance fees	0%	The investment is designed to directly track Ether with no outperformance; as such there are no performance fees
	Carried interests	0%	Not Applicable

How long should I hold it and can I take my money out early?

The product should be held for a short term period - a recommended period of up to one year. However, as Ether is highly volatile, investors should monitor the value of the product constantly as sudden changes in value will be frequent and abrupt.

Investors are able to sell the product on the exchange venue.

Early termination by the Issuer: The product may be terminated by the Issuer upon exercise of a discretionary right to terminate the product early.

How can I complain?

Any complaint about the sale of the product should be made to your intermediary or distributor. A complaint about any other aspect of this product sold be made to the Issuer via email: info@xbtprovider.com. Making a complaint will not prejudice your right to take legal action.

Other relevant information

This document may be updated from time to time. The latest Key Information Document (KID) is available free of charge at www.coinsharesgroup.com/etps/xbt-provider. The prospectus (a base prospectus as may be supplemented from time to time and completed by final terms) contains important and legal information regarding the product, its risk, the Issuer, and its Guarantor. It is available free of charge at www.coinsharesgroup.com/etps/xbt-provider. The information contained in this KID does not constitute a recommendation to buy or sell the product and is no substitute for individual consultation with the investor's bank or advisor. The KID is a pre-contractual document which gives you the main information about the product (characteristics, risks, costs, etc.).
